

GENERATE YOUR OWN ELECTRICITY AND LOWER YOUR HYDRO BILL

The Net Metering Program encourages BC Hydro customers to connect small (up to 100 kW), clean or renewable electricity generators to the grid and offset their electricity use.

At the end of each year, if you have generated more electricity than you have consumed, BC Hydro will pay you 9.99 cents per kWh.

Based on our experience to date, small electricity generators are usually solar photovoltaic (PV) panels, run-of-river or wind. However any clean or renewable generation can apply (as defined in B.C.'s Clean Energy Act).

How can I generate my own electricity?

1. Be connected to BC Hydro's grid—and preferably have a smart meter.
2. Own a form of clean electricity generation that is located on your property.
3. Review the technical and safety requirements of the program at bchydro.com/netmetering.
4. Apply to the Net Metering Program and contact us if you have any questions at net.metering@bchydro.com or 604 623 3878.

QUICK FACTS

- A typical solar installation on a residential roof is 16 PV panels
- This number of panels typically generates 4,400 kilowatt hours of electricity over a year
- Solar systems of this size can cost approximately \$10,000 to \$20,000

Process Guide

What you can expect on your bill

As a net metering customer, your smart meter runs in two directions: it measures how much electricity is flowing into your home from the grid (inflow), and how much electricity is flowing to the grid (outflow).

- 1 Electricity inflow is 1,200 kWh
- 2 Electricity outflow is 200 kWh
- 3 Previous balance of generation is 100 kWh
- 4 Total amount of electricity to be charged to customer is 1,200 - 200 - 100 = 900 kWh
